Program 3: Counter Application using useState

3. Create a Counter Application using React that demonstrates state management with the useState hook. Display the current value of the counter, add buttons to increase/decrease, a Reset button, and custom increment/decrement step value.

Step-1: Create React Application

```
npx create-react-app counter-app
```

Step-2: Modify App.js

```
import { useState } from 'react';

export default function App() {
  const [count, setCount] = useState(0);
  const [step, setStep] = useState(1);

  return (
    <div style={{ textAlign: 'center', marginTop: '50px' }}>
      <h1>Counter Application</h1>
      <h2>{count}</h2>
      <button onClick={() => setCount(count + step)}>
        Increase by {step}
      </button>
      <button onClick={() => count - step >= 0 && setCount(count - step)}>
        Decrease by {step}
      </button>
      <button onClick={() => setCount(0)}>Reset</button>
      <br /><br />
      <input
        type="number"
        value={step}
        onChange={(e) => setStep(+e.target.value)}
        min="1"
      />
    </div>
  );
}
```
