Program 5: Image Gallery with Component Composition

5. Develop a React application that demonstrates component composition and props passing. Render multiple BasicFigure components inside a FigureList container, allowing users to add or remove images dynamically.

Step-1: Create React Application

```
npx create-react-app figure-gallery
```

Step-2: Update App.js

```
import { useState } from 'react';

const Figure = ({ src, cap }) => (
  <div style={{ textAlign: 'center' }}>
    <img src={src} width="150" alt={cap} />
    <p>{cap}</p>
  </div>
);

export default function App() {
  const [f, setF] = useState([
    { src: 'https://picsum.photos/200', cap: 'Image 1' },
    { src: 'https://picsum.photos/200', cap: 'Image 2' }
  ]);

  return (
    <div style={{ textAlign: 'center' }}>
      <h2>Image Gallery</h2>
      <button onClick={() => setF([...f, { src: `https://picsum.photos/200?${f.length}`, cap: `Image ${f.
        Add
      </button>
      <button onClick={() => setF(f.slice(0, -1))}>
        Remove
      </button>
      <div style={{ display: 'flex', justifyContent: 'center', gap: 10, marginTop: 20 }}>
        {f.map((x, i) => <Figure key={i} {...x} />)}
      </div>
    </div>
  );
}
```
