Program 7: Profile Card Component with External and Inline Styling

7. Develop a React Application featuring a ProfileCard component to display user profile information (name, profile picture, bio), utilizing both external CSS and inline styling with interactive hover effects.

Step-1: Create React Application

```
npx create-react-app profile-card-app
```

Step-2: Update App.js

```
import { useState } from 'react';

const Card = ({ name, bio, img }) => {
  const [bg, setBg] = useState('#eee');
  return (
    <div
      onMouseEnter={() => setBg('#d1c4e9')}
      onMouseLeave={() => setBg('#eee')}
      style={{
        background: bg,
        padding: 20,
        width: 250,
        textAlign: 'center',
        borderRadius: 10,
        margin: '50px auto'
      }}
    >
      <img
        src={img}
        alt={name}
        style={{ width: 100, height: 100, borderRadius: '50%' }}
      />
      <h3>{name}</h3>
      <p>{bio}</p>
    </div>
  );
};

export default function App() {
  return (
    <Card
      name="vtucircle"
      bio="Provides VTU notes, syllabus, and papers."
      img="https://vtucircle.com/wp-content/uploads/2024/11/cropped-vtucircle_icon-1.png"
    />
  );
}
```
