Program 8: Reminder Application with Filtering

8. Develop a Reminder Application that allows users to manage tasks with due dates, descriptions, completion status, and filter options (All, Done, Pending).

Step-1: Create React Application

```
npx create-react-app react-reminder-app
```

Step-2: Update App.js

```
import { useState } from 'react';

export default function App() {
  const [t, s] = useState([]);
  const [n, sn] = useState('');
  const [d, sd] = useState('');
  const [f, sf] = useState('all');

  return (
    <div style={{ textAlign: 'center' }}>
      <h3>Reminder</h3>
      <input value={n} onChange={e => sn(e.target.value)} placeholder="Task" />
      <input type="date" value={d} onChange={e => sd(e.target.value)} />
      <button onClick={() => n && d && (s([...t, { i: Date.now(), n, d, c: 0 }]), sn(''), sd(''))}>
        Add
      </button>
      <br /><br />
      {['all', 'done', 'pending'].map(x =>
        <button key={x} onClick={() => sf(x)} style={{ margin: '0 5px' }}>{x}</button>
      )}
      {t.filter(x => f === 'all' ? true : f === 'done' ? x.c : !x.c).map(x => (
        <div key={x.i} style={{ margin: '10px 0' }}>
          {x.n} ({x.d}) - {x.c ? 'Done' : 'Pending'}
          <button onClick={() => s(t.map(y => y.i === x.i ? { ...y, c: !y.c } : y))}>✓</button>
          <button onClick={() => s(t.filter(y => y.i !== x.i))}>X</button>
        </div>
      ))}
    </div>
  );
}
```
