Program 9: React Routing with react-router-dom

9. Design a React application that demonstrates routing using react-router-dom with navigation links to Home, About, and Contact pages, highlighting the active link.

Step-1: Create React Application

```
npx create-react-app my-routing-app
```

Step-2: Install react-router-dom

```
npm install react-router-dom
```

Step-3: Update App.js

```
import { BrowserRouter, Routes, Route, NavLink } from 'react-router-dom';

const Page = ({ t, c }) => (
  <div style={{ textAlign: 'center', marginTop: 30 }}>
    <h2>{t}</h2>
    <p>{c}</p>
  </div>
);

export default function App() {
  return (
    <BrowserRouter>
      <nav style={{ textAlign: 'center', marginBottom: 20, padding: 10, background: '#f0f0f0' }}>
        <NavLink to="/" style={({isActive}) => ({ margin: 10, fontWeight: isActive ? 'bold' : 'normal' })
        <NavLink to="/about" style={({isActive}) => ({ margin: 10, fontWeight: isActive ? 'bold' : 'norma
        <NavLink to="/contact" style={({isActive}) => ({ margin: 10, fontWeight: isActive ? 'bold' : 'nor
      </nav>
      <Routes>
        <Route path="/" element={<Page t="Home Page" c="Welcome to Home!" />} />
        <Route path="/about" element={<Page t="About Page" c="About us info" />} />
        <Route path="/contact" element={<Page t="Contact Page" c="Contact us here" />} />
      </Routes>
    </BrowserRouter>
  );
}
```
